

The Sign - Whitepaper

Ticker: TSIGN | Chain: Solana (SPL, 2022 token standard) | Decimals: 6

Document version: 2025-09-26

This document describes The Sign token and the AI-Proof Initiative. The Sign is a participation/utility token. It is not equity, it is not e-money, and it does not grant rights to profits, dividends, or ownership. Nothing herein constitutes investment advice or a solicitation to purchase financial instruments.

1. Executive Summary

The AI-Proof Initiative exists to confront the Great AI Displacement by building a user-owned digital economy grounded in data sovereignty. The Sign (TSIGN) is a multi-purpose participation token that aligns contributors, partners, and the wider public around this mission. Total supply is 100,000,000,000 TSIGN. Distribution: 50% publicly tradable/liquidity, 49.9% Strategic Partnership & Development Fund, 0.05% Founding Team, 0.05% Presale. The presale offers up to 50,000,000 TSIGN at a fixed price of \$0.000777 (USDC), with a hard cap of \$38,850, a per-wallet minimum of \$100 and maximum of \$3,500. Proceeds seed DEX liquidity on Raydium, cover compliance including incorporation of The AI-Proof Company s.r.o., and fund initial operations.

2. Vision and Mission

Mission: build a parallel, people-owned economy that pays individuals for their time, attention, and insight; reclaim data sovereignty from centralized platforms; and create a resilient public digital commons.

3. The Problem: Great AI Displacement & Technofeudalism

Advanced AI threatens significant job displacement among knowledge workers. Meanwhile, today's digital economy centralizes data and value extraction among a few large platforms. The Initiative seeks to reverse this through a user-owned dataset and a set of fair-by-design services (the AI-Proof franchises) where value accrues back to contributors.

4. The AI-Proof Solution

On-Demand Custom Public Dataset Economy. Users interact with an AI-enhanced Q&A; feed and receive data dividends for micro-contributions. A personal AI agent governs consented data sharing via privacy-preserving methods.

AI-Driven Job & Company Creation. Pair the growing dataset with AI to identify unmet needs, match them with community skills, and bootstrap new jobs and ventures.

AI-Proof Franchise Strategy. Launch open, user-owned alternatives (e.g., aiproof.music, aiproof.casino, aiproof.email, aiproof.stream, aiproof.rideshare, aiproof.guide) that reclaim dataflows while aligning incentives via TSIGN.

Voice of the People AI. A civic instrument trained on citizens' consented input to improve accountability and democratic responsiveness.

Long-term DePin Vision. User-run nodes for storage and compute increase sovereignty and resilience.

5. The Sign Token (TSIGN)

Chain: Solana (SPL, 2022 token standard); Decimals: 6; Total supply: 100,000,000,000. Utility includes: participation and access within the ecosystem; staking for roles; and governance votes/signaling (non-binding initially). TSIGN is not equity and confers no profit, dividend, or ownership rights.

Allocation	Percent	Tokens (approx.)
Publicly Tradable / Liquidity Pool	50.0%	50,000,000,000
Strategic Partnership & Development Fund	49.9%	49,900,000,000
Founding Team	0.05%	50,000,000
Presale	0.05%	50,000,000

Token Distribution

6. Presale Details

- Allocation: up to 50,000,000 TSIGN.
- Price: \$0.000777 per TSIGN; currency accepted: USDC.

- Hard cap: \$38,850. Estimated tokens sold at hard cap: 50,000,000 TSIGN.
- Schedule: starts 10 October 2025, 12:00 (Europe/Bratislava); open until hard cap is reached.
- Per-wallet limits: minimum \$100; maximum \$3,500.
- Admission: open; transactions above the hard cap will be rejected.
- Unlock: presale tokens are transferable at token launch.

7. Use of Proceeds (Target)

- Initial DEX Liquidity (Raydium): €20,000 (LP tokens locked 12 months)
- Legal & Compliance (incl. €5,000 s.r.o. capital): €7,500
- Mission-critical systems (first 3 months of ops): €7,500

8. Liquidity & Locks

DEX listing on Raydium with approximately €20,000 initial liquidity. LP tokens targeted to be locked for 12 months. The token mint will be revoked; freeze authority is temporarily held by the founder for community safety and will later transition to an appropriate governance structure (preferably multisig).

9. Vesting & Treasury Controls

Founding Team (0.05%): vesting over 12 months (linear). Strategic Partnership & Development Fund (49.9%): initially controlled by Daniel Bulla as sole signer; to transition to multisig once expert team is formed.

10. Governance

Off-chain, Snapshot-style voting (moving to on-chain in future).

11. Roadmap (High-Level)

- Grow a committed community and secure collaborations with experts; target 500 paying members.
- Pilot localized 'Voice of the People' AI experiments in up to five countries.
- Ship one pilot AI-Proof service (e.g., aiproof.email or aiproof.guide) with an early adopter group.

12. Risks & Disclosures

- Market volatility and liquidity risk, including the risk of partial or total loss of value.
- Regulatory and policy risk in the EU and globally; classifications and requirements may change.

- Execution and technical risk, including smart-contract bugs or operational errors.
- Sybil/bot participation risk during open presale and post-listing trading.
- Counterparty risk with third-party infrastructure (exchanges, wallets, RPC, oracles).
- No rights to profits, dividends, or equity; token utility and adoption are not guaranteed.

Regulatory note: the issuer intends to operate within applicable EU requirements. This document is provided for transparency and does not constitute a prospectus nor a key information document. Participants are responsible for compliance with their local laws and for their own tax obligations.

13. Issuer & Contacts

Issuer: The AI-Proof Company s.r.o. (to be incorporated immediately after presale conclusion). Registered office: to be registered (Slovak Republic). Konalet (managing director): Daniel Bulla (founder & CSO). Crypto custody: Daniel Bulla. Fiat banking: Tatra Banka (Slovakia). Contact: thesign@aiproof.company.

Domain acquisition note: the presale price was selected to mirror the 0.05% presale allocation's approximate value of the aiproof.com domain (currently listed around €33,000) to enable its early purchase via a matching 0.05% TSIGN grant to the contributor who provides the domain.

Appendix A: Calculations

Presale allocation = $0.05\% \times 100,000,000,000 = 50,000,000$ TSIGN. At $\$0.000777/\text{TSIGN}$, full presale allocation would raise $\$38,850.00$. Hard cap is set at $\$38,850$.
